

Service tips for WEDA pumps

Make sure your pump is ready for the season.
Here are some handy tips for smooth and
efficient operation.

Atlas Copco

Be ready to pump!

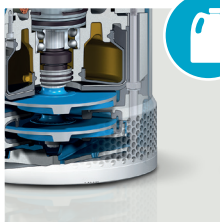

Check power cable condition:

A rupture in the insulation can cause water to enter through the cable leading to a potential electrical hazard or major failure.

Check for external damages or loosen parts:

Periodical visual inspections help prevent possible breakdowns. Incorrect product usage or external factors can lead to damage on the pump housing that can lead to major failures on internal components due to water entry.

Oil check/change

To guarantee optimum lubrication and sealing performance in all applications, make sure the oil is replaced every 6 months or according to the instruction manual.

Only genuine parts guarantee quality and high performance.

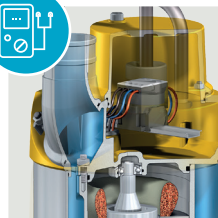

Inspect power cable sealing:

An improper sealing on the cable gland might cause water entry leading to a potential major electrical failure and consequent down time.

Check condition of electrical motor and safety devices:

A low insulation-resistive value can lead to an unexpected breakdown in operation. To prevent this Atlas Copco advises to periodically measure the stator insulation and check the functionality of all electrical safety devices.

Inspect condition and adjustment of wear parts:

It is advised to periodically check the condition of the wear components, as adjustments may be needed. We have developed Maintenance and Wear & Repair Kits that are handy to have on site for quick repair or preventative maintenance for maximum uptime and optimum performance.

Check condition and functioning of float switch:

This device assists in starting and stopping your pump automatically, any malfunction will impact your productivity or jeopardize the pump condition.

Use for your pump:

Genuine Oil

Wear and Repair kits

Maintenance Kits

Committed to sustainable productivity

We stand by our responsibilities towards our customers,
towards the environment and the people around us.
We make performance stand the test of time.
This is what we call – Sustainable Productivity.
